

PETG Disposal – Simple & Environmentally Friendly – Customer Information

Vers.1.0 / 17.08.2025

Dear Customers,

PETG is a recyclable plastic. To help protect the environment together, we kindly ask you to observe the following guidelines when disposing of PETG materials:

1. Preparation

- Separate PETG from other materials (metal, paper, other plastics).
- Clean waste if necessary (e.g., remove food residues).
- Large pieces can be cut into smaller pieces to facilitate transport and recycling.

2. Disposal

- **Recycling:** Take PETG waste to certified plastic recycling facilities or municipal collection points.
- **Energy recovery:** If recycling is not possible, PETG may be disposed of in waste-to-energy plants.
- **Not allowed:** Do not dispose of PETG in household trash, waterways, or open fires.

3. Labeling

- Label PETG waste, e.g., with “PETG – Plastic Waste,” especially for larger quantities.

Thank you for responsibly handling plastic together with us!
